

APIs

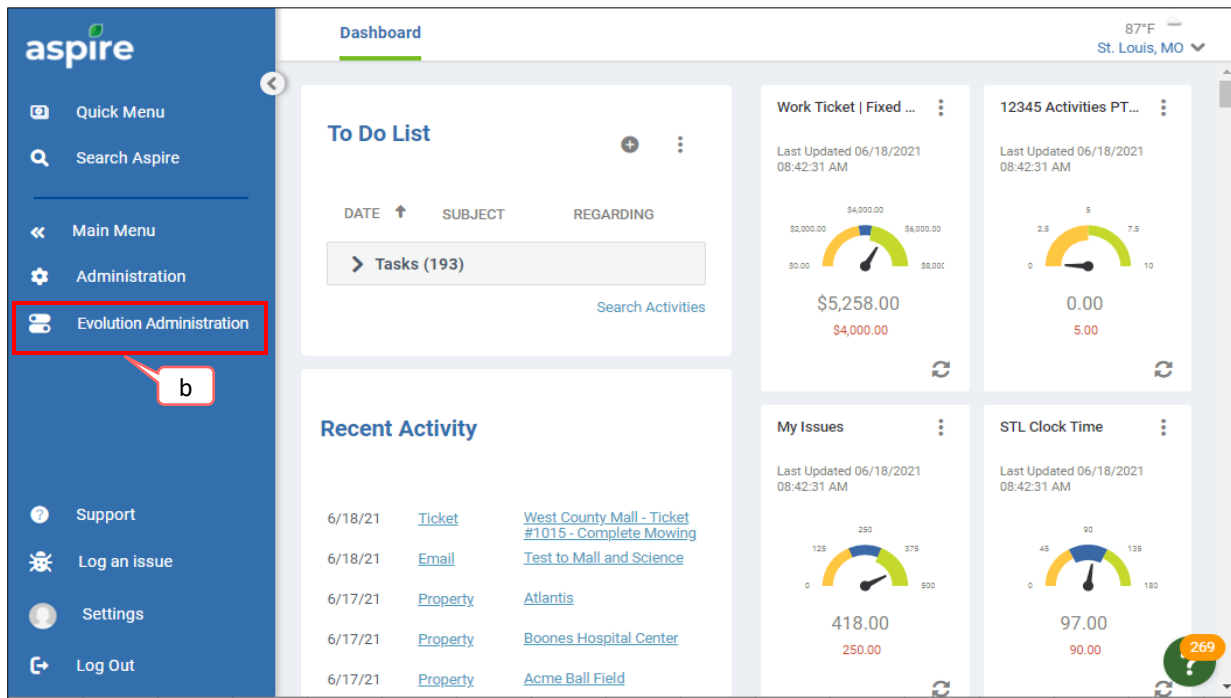

The API option from Evolution Administration allows access to the Aspire API. The credentials are generated for each Aspire system, which are then used when accessing the API. Once access has been acquired, the API can be accessed using the following URL:

<https://cloud-api.youraspire.com/swagger>

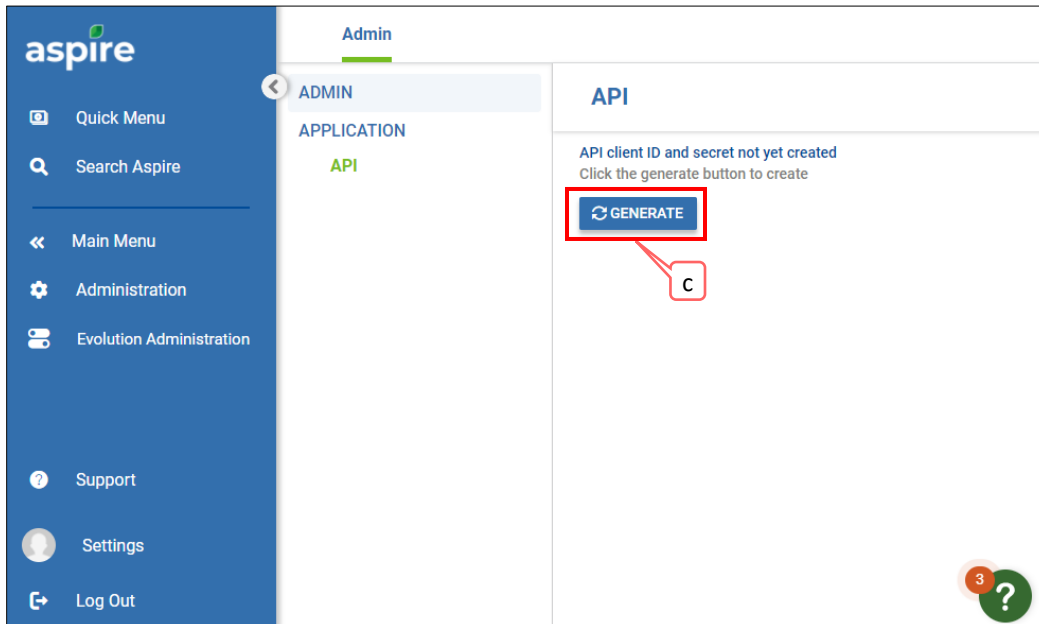

Evolution Administration

Aspire’s Evolution Administration screen is used by company-designated system administrators to maintain this company-specific information on an ongoing basis after initial deployment. The Evolution Administration screen is accessed by clicking on the Settings icon^a to display the menu, then clicking on Evolution Administration^b.

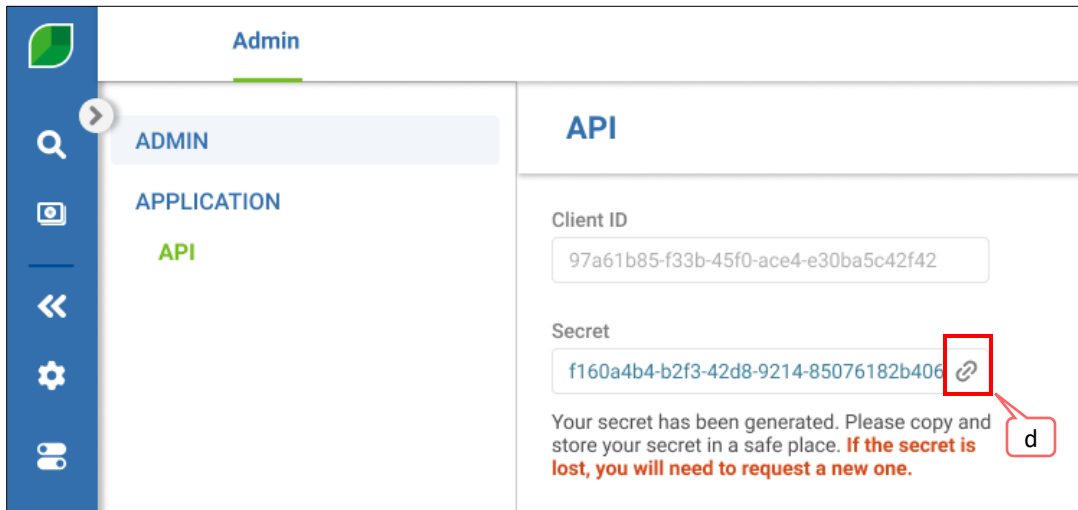

1. Once Evolution Administration is selected, the Admin tab will be displayed. In order to generate a Client ID and the Secret code, click on the Generate^c button.

- The Client ID will be displayed each time the API option is used. However, the Secret that is generated will not be displayed and this value should be copied and placed in a location that it can be accessed when needed. Use the Copy to Clipboard^d option in the Secret box to copy the value.

- If the Secret becomes lost, a new Secret can be generated by clicking on the Regenerate^e button.
